OVERVIEW OF WAHOO

WAHOO dashboard technology, reporting, and consulting services **connect** data-driven analytics to operations, **centralize and control** sensitive data flow, and **leverage** tactical tools to increase member and provider engagement and drive profitability. WAHOO enables payers and providers to manage member or patient and physician risk. This leads to increased market share and savings that are then re-invested back into product offerings and attractive sales payment models.

Dashboards for All Levels of an Organization

The WAHOO framework features three levels of dashboards:

- Executives
- Operational Leaders
- Tactical Analytics

Dashboards flow from a centralized data mart and are easy to use. Saving you time, while knowing where to focus and how to compare performance against competition, will drive the success of your business.

Member and Provider Level Profilers

An important function of WAHOO is member and provider level profiling, which gives organizations the ability to rank members and providers by key financial, operational, and clinical metrics. This tool was designed to help operational leaders fix root processes, increase both member and patient satisfaction, and optimize financial results.

Risk Adjustment, HEDIS, and Rx Adherence Profiling

WAHOO provides detailed risk adjustment suspect lists as well as gaps in care. Using historical medical claims and pharmacy records, revenue opportunity is then estimated and stratified based on the source and frequency of data corresponding to the clinical gap. The suspect lists will inform organizations where to focus in order to help improve the accuracy of risk scores, quality of care, and star ratings.

Consulting Wrap-Around Services

Analytics alone can't drive strategy and execution. WAHOO consulting wrap-around services help organizations identify trends and contextualize results. Includes monthly meetings with operational leaders, quarterly meetings with executives, annual deep dive market analysis, and 10 hours of ad-hoc consulting per month to help drive operational results.
