

RISK ADJUSTMENT MODELING

Unsure of how recent CMS changes to risk adjustment will impact your Medicare Advantage, MSSP, ACO REACH, or other value-based arrangements?

Wakely risk adjustment solutions provide analyses and tools to help your organization understand and prepare for risk adjustment changes coming in 2024.

In response to the reveal of a revised CMS-HCC risk adjustment model in this year's Medicare Advantage rate announcements, Wakely has developed a tool that assesses the impact of the newly proposed CMS-HCC model on your population

WITH THE ASSESSMENT, USERS WILL RECEIVE:

- + Summary of expected impact on risk scores under the current (v24) and new (v28) CMS-HCC risk adjustment models
- + Risk score impacts by conditions and disease groups (diabetes, vascular, heart conditions, etc.)
- + Summary of demographic changes to the risk score model
- + Detailed diagnosis-code-level risk score impacts to identify drivers of change and coding education improvements
- + Comparisons of disease prevalence and condition risk weights under each risk score model
- + Ability to assess each of the above metrics dynamically and by different populations in a dashboard view (duals vs non-duals, by clinic or attributed PCP, etc.)

Our Expertise

Wakely Consulting Group is an actuarial consulting firm that provides a comprehensive array of expert actuarial services and strategic consulting to the medical and healthcare sectors. With fast-growing value-based care initiatives among both government-based and private health insurers, Wakely has become a leader in the actuarial and strategy arena within this space. Wakely supports a wide variety of ACOs, private risk-bearing entities, payers, private equity firms, and many others that are engaged in value-based care contracts.

If you have questions or would like a demonstration, please reach out to your favorite Wakely Consultant or email products@wakely.com
