

## WAKELY NETWORK OPTIMIZATION TOOL WNOT

The Wakely Network Optimization Tool is designed to support risk-bearing entities in identifying the efficient and non-efficient providers in a proposed network to optimize financial opportunities within their value-based arrangements.

Whether you are an ACO in ACO REACH, MSSP, a risk-bearing entity taking on Medicare Advantage, or a group in a private risk-based contract, understanding the performance of your provider network could not be more important.

Our network tool utilizes the nationwide CMS 100% Medicare FFS databases, allowing users to accurately scenario test and optimize their participating providers for financial success

The network tool will provide insights into attributed patients, historical risk scores, medical cost experience, historical trends, and expected performance in outer years under a variety of value-based programs, including both MSSP and ACO REACH.

## Our Expertise

Wakely Consulting Group is an actuarial consulting firm that provides a comprehensive array of expert actuarial services and strategic consulting to the medical and healthcare sectors. With fast-growing value-base care initiatives among both government-based and private health insurers, Wakely has become a leader in the actuarial and strategy arena within this space. Wakely supports a wide variety of ACOs, private risk-bearing entities, payers, private equity firms, and many others that are engaged in value-based care contracts.
