On October 8, 2021, CMS published the 2022 Medicare Advantage (MA) and Part D Star Ratings. In addition, CMS published a Fact Sheet highlighting changes to contract performance and general observations in the new Star Ratings<sup>1</sup>. This article summarizes Wakely's observations of changes in the published 2022 Star Ratings data as well as the considerations that COVID-19 had on the 2020 performance year. These topics will be further addressed in an upcoming whitepaper to be released by Wakely on the impact that COVID-19 had on Medicare quality performance for 2020, as well as the impact of the protections put in place by CMS.

### Emerging Trends in 2022 Star Ratings Impacting Payment Year 2023

Wakely has identified several emerging trends in the 2022 Star Ratings. In addition, we continue to observe ongoing changes to the Star Ratings program. These observations are as follows:

- Overall Star Ratings have dramatically improved from 2021 to 2022, from an average of 4.05 in 2021 to 4.38 in 2022. The figure below shows 2021 enrollment under each 2021 Star Rating, as well as the movement from 2021 to 2022 Star Ratings (either staying constant, increasing 0.5 Stars, etc.). Around two-thirds of MA enrollment was on contracts that increased either half or a full Star Rating from 2021 to 2022. Because of the protections in place by CMS for the 2022 Star Ratings—described in detail later within this brief—almost no contracts actually decreased in Star Ratings in 2022. We anticipate that this improvement in 2022 Star Ratings will yield significant additional revenue for plans in 2023.

<sup>2</sup> Weighted average Star Ratings use enrollment as of September 2021.

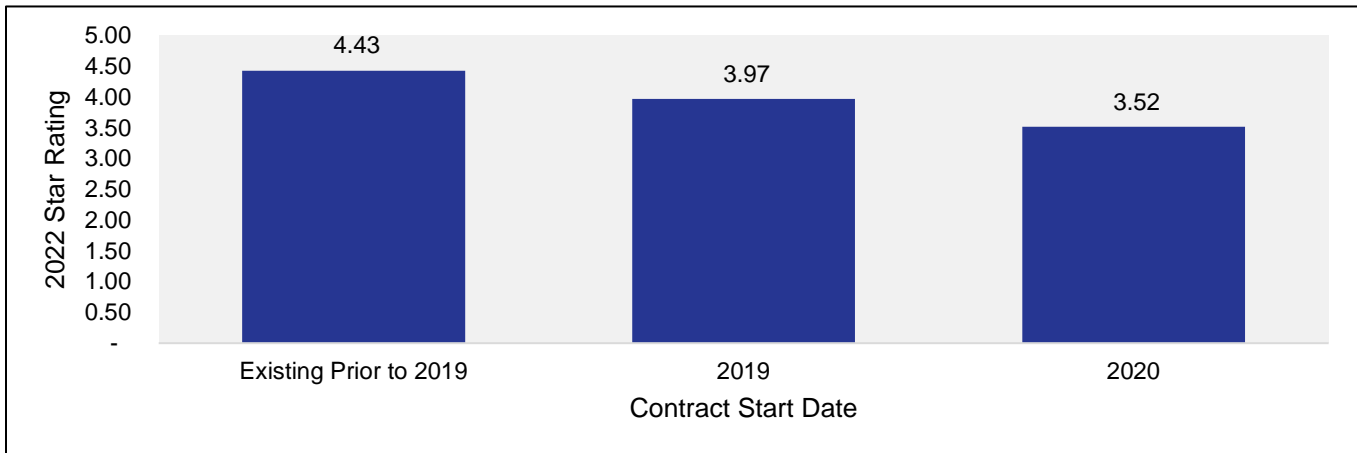

Figure 1: Contract Star Rating Changes, 2021 to 2022

- Due to the “better of” treatment CMS is temporarily applying to contracts with experience prior to 2020, contracts that were new in 2019 or 2020 have a disadvantage relative to established contracts with experience. For each measure, CMS assigns the better Star Rating of the current year or prior year. For HEDIS and CAHPS measures, this is the better of 2020 or 2018 performance because the 2019 performance data was not collected due to COVID-19 (for more information on this change, see the IFR released March 2020<sup>3</sup>). For all other measures, CMS assigns the better of 2020 or 2019. Contracts that started in 2019 will not have 2018 experience to rely on, and contracts that started in 2020 will not have prior year experience from 2018 or 2019. These contracts did not benefit from the “better of” logic and were forced to rely on their 2020 performance for some or all of the Stars measures. Figure 2 below shows a summary of the average 2022 Star Rating for contracts with an effective date of 1/1/2020, 1/1/2019, and contracts established prior to these dates. The lower average Star Rating for new in 2019 and new in 2020 contracts shows the clear disadvantage of the CMS policy. We do note that newer contracts often receive lower Star Ratings than established contracts, but this relationship has been exacerbated by the favorable treatment that established contracts received in their 2022 Star Ratings.

<sup>3</sup> <https://www.cms.gov/files/document/covid-final-ifc.pdf>

**Figure 2: Average 2022 Star Ratings by Contract Effective Date**

- As expected, COVID-19 impacted plan performance in Stars quality measures; however, the impact was not homogenous across all measures. Plan performance declined for all of the Part C HEDIS measures on average but improved in the CAHPS survey and Medication Adherence measures. Appendix 1 illustrates the change in average measure values between the 2021 and 2022 Star Ratings, based on 2018/2019 and 2020 measurement year performance respectively.
- The change in measure-level performance led to large changes in Star Rating cutpoints. Table 1 highlights some of the measures with the largest cutpoint changes. This table also highlights that the increase or decrease in contract performance did not always positively correlate with the change in measure-level Star Ratings, as in some cases, the cutpoints moved more than average contract performance. Note that the average Star Rating changes reported in this table do not take into account the “better of” Star Rating treatment, again highlighting that contracts without prior year performance were at a disadvantage relative to contracts with prior year performance to fall back on.

**Table 1: Changes in Measure-Level Cutpoints and Star Ratings**

| 2022 Stars Measure   | Star Rating Cutpoints |     |     |     | Change in Average Measure Value | Change in Average Star Rating* |
|--|-----------------------|-----|-----|-----|---------------------------------|--------------------------------|
|  | 2                     | 3   | 4   | 5   |                                 |                                |
| C01: Breast Cancer Screening                                 | -8%                   | -5% | -7% | -7% | -0.031                          | 0.454                          |
| C14: Improving Bladder Control                               | 3%                    | 2%  | 3%  | 2%  | 0.005                           | -0.493                         |
| D08: Medication Adherence for Diabetes Medications           | 4%                    | 5%  | 3%  | 3%  | 0.016                           | -0.450                         |
| D09: Medication Adherence for Hypertension (RAS antagonists) | -6%                   | -2% | 0%  | 1%  | 0.019                           | 0.643                          |
| D10: Medication Adherence for Cholesterol (Statins)          | 3%                    | 0%  | 1%  | 3%  | 0.023                           | 0.248                          |

\* 2022 Star Ratings apply the 2022 cutpoints to 2022 Measure Values. The “better of” measure-level Star Rating logic is not applied in this comparison.

## Summary of COVID-19 Regulations Impacting 2022 Star Ratings

Much of the increase in Overall Star Ratings in 2022 can be attributed to changes in regulation CMS has put in place to address the impact of COVID-19 on the 2020 performance period.

These key changes include:

- All MA and PD contracts will qualify for the Extreme and Uncontrollable Circumstances (EUC) adjustments finalized in the CY 2020 final rule (published on April 16, 2019). These plans will receive the higher of their measure-level rating from 2021 (either 2018 or 2019 performance) and 2022 (2020 performance).
- The implementation of 5% cutpoint guardrails, intended to limit the movement of cutpoints from one year to the next, will be delayed one year. CMS recognized that COVID-19 had the potential to drive drastic changes in measure-level scores in 2020 so the delay in implementing these guardrails will allow cutpoints to change by more than 5% in order to keep pace with changes in national performance that result from COVID-19.
- Potential decreases in 2020 measure-level performance means that the 2020 improvement measure performance may be lower than historical years, or even unfavorable. To minimize the negative effect of COVID-19 on improvement measures, CMS has implemented a “hold harmless” arrangement for all contracts. Overall Star Ratings are calculated with and without the improvement measures, and the contract receives whichever Star Rating is higher.

Overall, we expect that the 0.35 higher average Star Ratings for 2022 will result in greater Medicare Advantage Payments in 2023 for many contracts, especially for those contracts increasing to 4.0 Stars.

### Appendix: 2021 and 2022 Stars Measure Values

Table A1 below shows the average contract performance in each measure for the 2021 and 2022 Star Ratings, based on 2018/2019 and 2020 measurement years respectively. Note that this is a simple average of contract performance that is not weighted by contract enrollment. This aligns with the treatment of contracts within the CMS Stars cutpoint methodology, which assigns an equal weighting to each contract regardless of enrollment.

**Table A1: Average Stars Measure Values**

| 2022 Stars Measure  | Data Source           | 2022 Measure Value | 2021 Measure Value | Change |
|---|-----------------------|--------------------|--------------------|--------|
| C01: Breast Cancer Screening                              | HEDIS                 | 0.715              | 0.746              | -0.031 |
| C02: Colorectal Cancer Screening                          | HEDIS                 | 0.739              | 0.741              | -0.002 |
| C03: Annual Flu Vaccine                                   | CAHPS                 | 0.741              | 0.731              | 0.010  |
| C04: Improving or Maintaining Physical Health             | HOS                   | NA                 | 0.688              |        |
| C05: Improving or Maintaining Mental Health               | HOS                   | NA                 | 0.820              |        |
| C06: Monitoring Physical Activity                         | HEDIS/HOS             | 0.495              | 0.520              | -0.024 |
| C07: Adult BMI Assessment                                 | HEDIS                 | NA                 | 0.973              |        |
| C08: Special Needs Plan (SNP) Care Management             | Part C Plan Reporting | 0.743              | 0.712              | 0.031  |
| C09: Care for Older Adults – Medication Review            | HEDIS                 | 0.918              | 0.925              | -0.007 |
| C10: Care for Older Adults – Functional Status Assessment | HEDIS                 | NA                 | 0.870              |        |
| C11: Care for Older Adults – Pain Assessment              | HEDIS                 | 0.924              | 0.929              | -0.005 |
| C12: Osteoporosis Management in Women who had a Fracture  | HEDIS                 | 0.467              | 0.479              | -0.011 |
| C13: Diabetes Care – Eye Exam                             | HEDIS                 | 0.730              | 0.753              | -0.023 |
| C14: Diabetes Care – Kidney Disease Monitoring            | HEDIS                 | 0.955              | 0.957              | -0.003 |
| C15: Diabetes Care – Blood Sugar Controlled               | HEDIS                 | 0.781              | 0.804              | -0.024 |
| C16: Rheumatoid Arthritis Management                      | HEDIS                 | 0.795              | 0.789              | 0.006  |
| C17: Reducing the Risk of Falling                         | HEDIS/HOS             | 0.554              | 0.577              | -0.023 |
| C18: Improving Bladder Control                            | HEDIS/HOS             | 0.455              | 0.450              | 0.005  |
| C19: Medication Reconciliation Post-Discharge             | HEDIS                 | 0.679              | 0.646              | 0.032  |

| 2022 Stars Measure   | Data Source           | 2022 Measure Value | 2021 Measure Value | Change |
|--|-----------------------|--------------------|--------------------|--------|
| C20: Statin Therapy for Patients with Cardiovascular Disease         | HEDIS                 | 0.838              | 0.809              | 0.029  |
| C21: Getting Needed Care   | CAHPS                 | 83.409             | 83.200             | 0.209  |
| C22: Getting Appointments and Care Quickly                           | CAHPS                 | 79.257             | 78.204             | 1.053  |
| C23: Customer Service  | CAHPS                 | 91.197             | 90.578             | 0.619  |
| C24: Rating of Health Care Quality                                   | CAHPS                 | 87.290             | 86.222             | 1.068  |
| C25: Rating of Health Plan   | CAHPS                 | 87.554             | 86.329             | 1.225  |
| C26: Care Coordination   | CAHPS                 | 86.636             | 86.020             | 0.616  |
| C27: Complaints about the Health Plan                                | CTM                   | 0.208              | 0.229              | -0.021 |
| C28: Members Choosing to Leave the Plan                              | MBDSS                 | 0.134              | 0.131              | 0.003  |
| C30: Plan Makes Timely Decisions about Appeals                       | IRE                   | 0.963              | 0.947              | 0.016  |
| C31: Reviewing Appeals Decisions                                     | IRE                   | 0.950              | 0.932              | 0.018  |
